In geometry, a hendecagon (also undecagon or endecagon) or 11-gon is an eleven-sided polygon. (The name hendecagon, from Greek hendeka "eleven" and gon "corner", is often preferred to the hybrid undecagon, whose first part is formed from Latin undecim "eleven".

Similar triangles. In geometry two triangles, ABC and $A'B'C'$, are similar if and only if corresponding angles have the same measure: this implies that they are similar if and only if the lengths of corresponding sides are proportional. It can be shown that two triangles having congruent angles (equiangular triangles) are similar, that is, the corresponding sides can be proved to be ...

MySQL supports a number of SQL data types in several categories: numeric types, date and time types, string (character and byte) types, spatial types, and the JSON data type. This chapter provides an overview of these data types, a more detailed description of the properties of the types in each category, and a summary of the data type storage requirements.

Heat Exchangers 73 individual thermal resistances of the system. Combining each of these resistances in series gives: $\frac{1}{UA} = \frac{1}{\eta_i h_i A_i} + \frac{1}{k_w S} + \frac{1}{h_o A_o}$ (5.7) where η_i is the surface efficiency of inner and outer surfaces, h is the heat transfer coefficients for the inner and outer surfaces, and S is a shape factor for the wall
